

Simply Postcode Address Finder - When installed into your own web site, Customers simply press a button to activate address lookup - enter postcode - select address - and the software fills in the appropriate information into Web Page.

Simply Postcode Address Finder - Reduces addressing errors and shopping cart abandonment.

We offer a PHP and VB/C# ASP.NET examples pages, which run on most web servers, which can be added to a web site in minutes using our example code.

 **Solution 1 : Simple HTML Popup Widget** - Can be added to almost any web page which doesn't allow code to run on server.

 **Solution 3 : Query Popup Postcode Address Finder** - This utilises a popup window to implement the Address Finder. This is the most complex form of integration, and has little impact on the design of your web page. It is the recommend solution of Internal Use web applications since it supports advanced word search.

Address Level Comparison

The web integration is available in two different levels of accuracy:

Thoroughfare/Street Level

Returns: Hill Rd
Wisbech
Cambridgeshire
PE13 2ZE

- Pros:** Half the price of Full Address
- Cons:** User needs to complete address
Open to user error, thus lost sale/delivery
Slower than Full address

Full Address Level

Returns: **Top Company Ltd**
First Floor
8 Hill Rd
Wisbech
Cambridgeshire
PE13 2ZE

- Pros:** Address is selected from list
Increased accuracy
Increased sales
Looks professional
Advanced Word search for internal use
- Cons:** More expensive than Thoroughfare Level
